Multan, Pakistan

SUMMARY

Backend Engineer specializing in high-performance, concurrent systems using Go (Golang) and PostgreSQL. A highly disciplined, self-directed developer with a proven track record of building scalable cloud architectures utilizing dual-storage asset pipelines (Backblaze/Supabase). Focused on writing idiomatic, highly optimized code, designing resilient relational schemas, and architecting concurrent backend services.

TECHNICAL PROJECTS

Dual-Cloud Asset Management Platform (Kineta.site)

- Architected a multi-cloud storage pipeline in Go, dynamically routing large file binaries to Backblaze B2 and user media to Supabase to minimize storage overhead and optimize cloud compute costs.
- Designed and indexed complex relational database schemas in PostgreSQL to power full-text search indexing, real-time data filtering, and concurrent user-rating aggregations.
- **Integrated** secure user authentication and session management layers to protect private file repositories and restrict unauthorized asset downloads.

JSON RESTful API Service

- Built middleware chain including panic recovery, rate limiting, CORS handling, and request timeouts using context cancellation.
- Designed a clean, modular architecture separating handlers, services, repository layers, and middleware for maintainability and testability.
- Developed an idiomatic, production-grade REST API utilizing Go's native concurrency paradigms, supporting full CRUD operations (GET, POST, PUT, DELETE) for a dynamic movie catalog dataset

INDEPENDENT COURSEWORK & SYSTEMS STUDY

Built production-ready web applications and concurrent systems to master backend engineering fundamentals independently.

Self-directed study of PostgreSQL indexing strategies (B-tree, GIN, BRIN), query planner analysis, and migration management.

TECHNICAL SKILLS

- **Languages:** Go (Golang), SQL (PostgreSQL), HTML5, CSS3
- **Databases & Storage:** PostgreSQL, MySQL, Supabase, Backblaze B2
- **Computer Science Fundamentals:** Distributed Systems, Advanced Relational Database Design, Indexing strategies, ACID compliance
